Allowable Subject Matter

1. Claims 1-12 are allowed.
2. The following is an examiner's statement of reasons for allowance:

As to claims 1 and 11, the prior arts of record do not anticipate or render obvious to one skilled in the art a method for fabricating a color filter by bonding a colored film on a substrate having a black matrix formed thereon, comprising several steps as claimed, more specifically the step of bonding the colored film onto the substrate in a direction whereby the colored film first contacts the matrix on the upstream side at the thinner edge is considered novel.

As to claim 7, the prior arts of record do not anticipate or render obvious to one skilled in the art a color filter comprising various elements as claimed, more specifically a resin black matrix having an opening and a step structure and a colored film covering a portion of the substrate located inside the opening of the black matrix and covering at least a portion of the black matrix wherein the black matrix has an edge portion located along the opening and wherein the step structure is formed at an intersection of the edge portion and a portion of the matrix contiguous with the edge portion and the edge portion is thinner than the portion of the matrix contiguous with the edge portion.

The newly cited reference JP 2000-105310 alone or in combination with any other prior art references fail to teach or suggest the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
